One bridge.
Four strings.

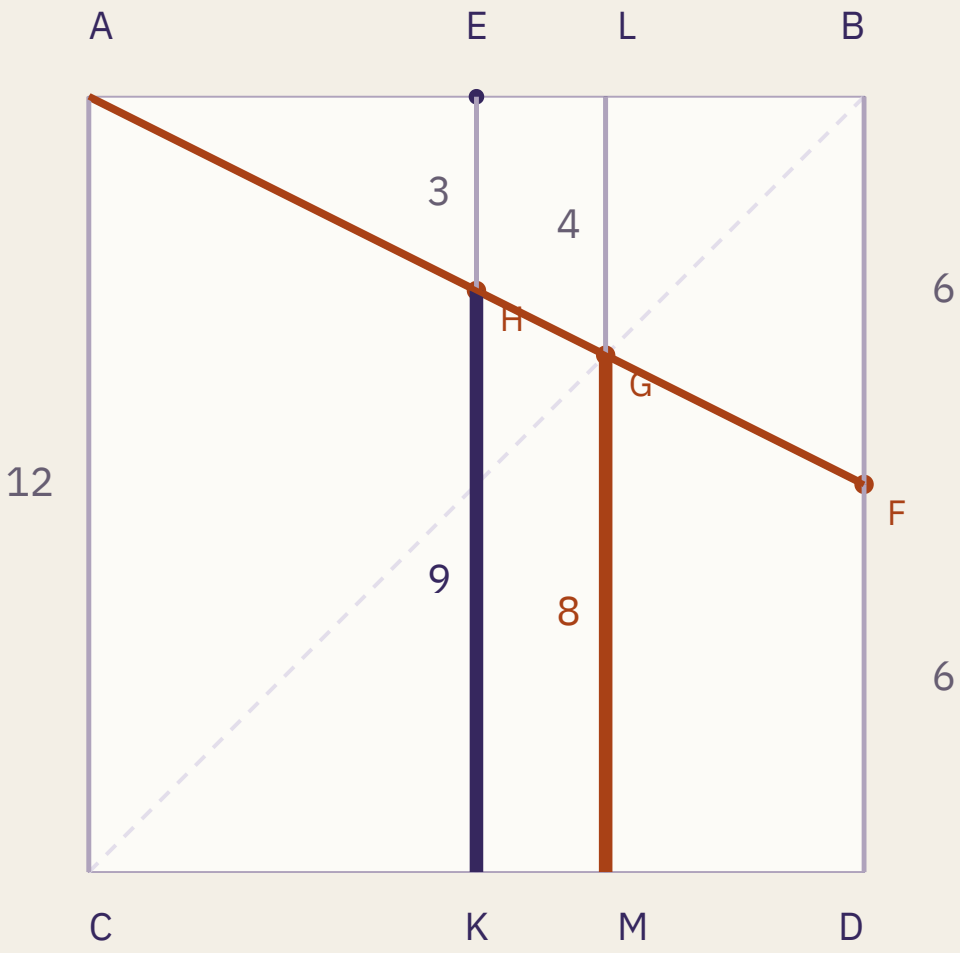

Build the source’s geometry, hear its network of consonances, then retune two inner strings while keeping the end interval fixed. This document retains the experiment captured when you pressed Save.

An ideal geometric and listening experiment after Ptolemy, Harmonics II.2. Uniform strings share the same full-length pitch; a zero-width bridge sets their sounding lengths. Tension, material, bridge height and coupling are held outside this model. Sine tones, absolute reference pitch and the four-string retuning exercise are modern choices. This is not a reconstruction or a measurement of an ancient instrument.

Editable JSON Exact CSV Diagram SVG Retuning WAV Interval WAV

The source board and your bridge

Construction stage 5. Right bridge contact 1/2 of the full height. Full-string reference 220 Hz. The initial square and four string positions follow the source’s first figure; altered contacts keep those strings fixed.

Length units: AC = 12. One shared bridge: AF.

> HK → GM: frequency ratio 9/8 · 203.91 cents. Agrees with the source's 9/8 whole tone.

The interval sound plays the selected first segment, then the second, using their current modeled frequencies. No ancient timbre is inferred.

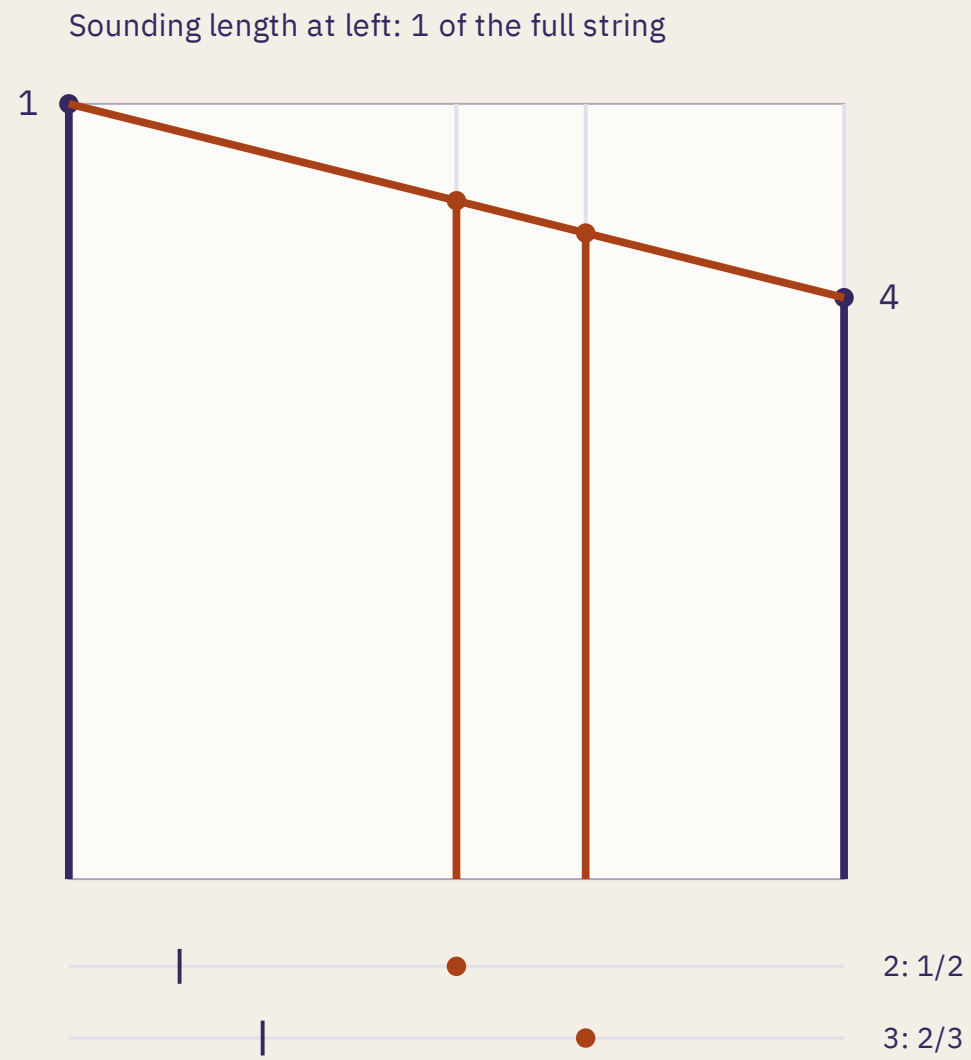

Sounding lengths on both sides of the bridge · full string = 12

Segment	Length	Pitch / full string	Hz
AC	12	1	220
HK	9	4/3	293.333
GM	8	3/2	330
FD	6	2	440
BF	6	2	440
LG	4	3	660
EH	3	4	880

Seven nonzero segments have six distinct lengths at the source setting: BF and FD are both 6. The number labels use a full string of length 12, without choosing an ancient unit or a physical size.

Keep the ends; move the inner strings

Target: enharmonic. Inner positions 1/2 and 2/3 of the width. Leftmost sounding length q = 1 of the full string.

2 of 4 target notes agree. The end notes fix the bridge line. Its two inner pitches still depend on where their strings cross it.

Actual and target frequency ratios share the current leftmost note as 1

String	Position / width	Actual	Target	Error, cents
1 · end	0	1	1	0 · exact
2 · inner	1/2	8/7	28/27	+168.21
3 · inner	2/3	6/5	16/15	+203.91
4 · end	1	4/3	4/3	0 · exact

The sound plays your four notes from left to right, pauses, then plays the four target notes. Both sequences use the same current leftmost pitch. The target ratios come from the Archytas report in I.13, retained here on pp.62–63. Sine oscillators make the ratios audible; they establish no ancient performance or physical instrument response.

The line fixes more than its ends

With a fourth between the two end notes, their sounding lengths are q and 3q/4. A straight bridge between the fixed end contacts leaves no independent height for the two inner contacts.

$$\text{Sounding length} = q(1 - x/4)$$

$$\text{Frequency / left note} = 1/(1 - x/4)$$

$$\text{Required } x = 4(1 - 1/\text{target ratio})$$

The original positions 1/2 and 2/3 necessarily give ratios 8/7 and 6/5. Shortening q raises every pitch by the same factor; interval ratios and errors stay fixed. Moving the two strings can change those ratios. Our exact ruler has 504 equal parts, chosen to represent all three targets' required positions without rounding. It is a modern numerical convenience.

Ptolemy's II.2 extension uses a longer construction and an octachord, with a common movable support. This is a reduced four-string analogy using a fourth as its end interval, rather than his full construction. His comparison on pp.100–101 also discusses the practical burden of moving strings and changing their separations. The model omits retensioning, coupling, support thickness and finger reach.

Greek printed letters and Wallis's Latin diagram labels

Greek	α	β	γ	δ	ε	ζ	η	θ	κ	λ	μ
Latin	A	B	C	D	E	F	G	H	K	L	M

Readings and transcription

Six excerpts from Wallis's 1682 edition, prepared against the retained images. Greek lowercase segment letters have their bars omitted. Line breaks, end-of-line hyphens, Latin ligatures and long s are normalized. Each reading identifies whether it is a sentence or a selected phrase. Wallis's Latin is an early modern translation. New English and contextual notes have not received independent philological review.

Start with a square

Ἐκτίθενται τετράγωνον, ὡς τὸ αβγδ.

Exponunt utique quadratum, ut ABCD.

They set out a square, such as ABCD.

Ptolemy describes a construction attributed to mathematicians. This is a selected complete sentence. The workshop uses Wallis's Latin diagram letters. Greek barred lowercase segment labels are normalized to ordinary lowercase here.

Ἐκτίθενται · *Exponunt*

They set out. A present-tense construction instruction. It introduces a proposed geometrical figure, rather than an excavated object.

τετράγωνον · *quadratum*

a square. The figure has equal sides and right angles. The later extension on p.99 allows a more general parallelogram.

Whole printed page 97.

Halve two different sides

διελόντες δίχα τὰς αβ καὶ βδ

bisectis AB & BD

having divided AB and BD in half

An excerpt of the next instruction, stopping before the named division points. The Greek participle διελόντες gives an action completed before joining the lines. Wallis uses a Latin ablative absolute. The E midpoint runs across the board; the F midpoint runs along a string. Neither instruction places G at the centre.

δίχα · *bisectis*

in two equal parts. The Latin puts the division into the participle ‘having been bisected’. In the diagram, AE = EB and BF = FD.

διελόντες · *bisectis*

having divided. Greek describes what the constructors do. Latin describes what has been done to AB and BD.

Whole printed page 97.

One board, many intervals

πάσας τὰς συμφωνίας, καὶ τὸν τόνον

Consonantiae omnes, & Tonus

all the consonances, and the tone

A selected noun phrase from the result, not a full sentence. Greek uses the accusative after ‘producing’; Wallis’s corresponding result makes the consonances and tone its grammatical subject. His spelling Consonantiae is normalized from the printed ligature. The list includes octave + fourth (8:3), octave + fifth (3:1) and two octaves (4:1). ‘All’ belongs to that theoretical list; it is not a claim about every musical interval or every culture’s consonance judgments.

συμφωνίας · *Consonantiae*

consonances. The named interval relations. In this model, a ratio of lengths becomes an inverse ratio of frequencies.

τόνον · *Tonus*

tone. Here the whole-tone interval 9:8, produced by lengths 9 and 8. It is a relation between pitches, not the absolute reference frequency.

Whole printed page 98.

Place the strings, then the bridge

τὰς χορδὰς παραλλήλους τε τῇ αγ, καὶ ἰσοτόνους ἀλλήλαις

chordas ipsi AC parallelas, atque inter se aequitonas

the strings parallel to AC and equal in pitch to one another

A noun-phrase excerpt from Ptolemy's instruction to stretch the strings in his extension of the instrument. The shared bridge follows this initial setup. ἰσοτόνους means equal in pitch; it does not establish equal physical tension by itself. Our uniform strings additionally hold material and tension fixed. The retuning bench is a reduced four-string analogy, not the full extended octachord drawn in the source.

παραλλήλους · *parallelas*

parallel. The strings keep a common direction. Their distances across the board can change independently of that direction.

ἰσοτόνους ἀλλήλαις · *inter se aequitonas*

equal in pitch to one another. An initial condition before dividing their sounding lengths. A real moved string would have to be checked again.

Whole printed page 99.

One common support

τὸ κοινὸν ἔχειν ὑπαγωγέα, καὶ ἕνα, καὶ ἐπὶ μίαν θέσιν

quod commune habeat subductorium, unicumque, & eodem situ positum

having one common movable support, in a single position

An excerpt of the advantage Ptolemy assigns to this method. The Greek infinitive phrase names the advantage; Wallis uses a ‘that’ clause. ὑπαγωγέα is the under-sliding support or bridge. The source then changes the common bridge’s position while preserving a genus. Our scaled bridge illustrates the similar-triangle principle with four chosen strings.

κοινὸν · *commune*

common. One support crosses all the strings. Moving a single crossing independently would require a different support.

μίαν θέσιν · *eodem situ*

one position. This concerns the bridge’s shared placement at a given setting. It does not promise that its placement never changes.

Whole printed page 100.

The practical price

τὰς χορδὰς ὅλας παραφέρειν

quod chordas integras transferre oporteat

moving the strings as wholes

A Greek infinitive excerpt from Ptolemy’s comparison of the two methods. Wallis’s selected clause expands it to ‘that it is necessary to move the whole strings’. Ptolemy also discusses changing string separations, sometimes by a large amount, in altering a tuning. The bench shows lateral geometry; it does not calculate finger reach, retensioning or practical playability.

ὅλας · *integras*

whole. The strings move across the board as wholes, rather than acquiring an independently moved contact under one string.

παραφέρειν · *transferre*

to move across. An infinitive describing the operation that this method requires. Our two inner string controls make that operation visible.

Whole printed page 101.

Whole printed evidence

The pages retain their figures, notes and critical apparatus. The source PDF has 189864593 bytes; SHA-256 862839d2cd52dfc62004d0f68da4d8381417e8be69e3901db0d5f73568931884. These eight complete JPEGs and all fonts and licenses were verified by byte length and SHA-256 before embedding.

An ideal geometric and listening experiment after Ptolemy, Harmonics II.2. Uniform strings share the same full-length pitch; a zero-width bridge sets their sounding lengths. Tension, material, bridge height and coupling are held outside this model. Sine tones, absolute reference pitch and the four-string retuning exercise are modern choices. This is not a reconstruction or a measurement of an ancient instrument. PDF tags and bookmarks depend on the printing tool. The repository's retained PDF has a separate structure review. Physical printing and an instrument built from these dimensions have not been tested.

SIL OPEN FONT LICENSE Version 1.1 - 26 February 2007

PREAMBLE
The goals of the Open Font License (OFL) are to stimulate worldwide
development of collaborative font projects, to support the font creation
efforts of academic and linguistic communities, and to provide a free and
open framework in which fonts may be shared and improved in partnership
with others.

The OFL allows the licensed fonts to be used, studied, modified and
redistributed freely as long as they are not sold by themselves. The
fonts, including any derivative works, can be bundled, embedded,
redistributed and/or sold with any software provided that any reserved
names are not used by derivative works. The fonts and derivatives,
however, cannot be released under any other type of license. The
requirement for fonts to remain under this license does not apply
to any document created using the fonts or their derivatives.

DEFINITIONS
"Font Software" refers to the set of files released by the Copyright
Holder(s) under this license and clearly marked as such. This may
include source files, build scripts and documentation.

"Reserved Font Name" refers to any names specified as such after the copyright statement(s).

"Original Version" refers to the collection of Font Software components as distributed by the Copyright Holder(s).

"Modified Version" refers to any derivative made by adding to, deleting, or substituting -- in part or in whole -- any of the components of the Original Version, by changing formats or by porting the Font Software to a new environment.

"Author" refers to any designer, engineer, programmer, technical writer or other person who contributed to the Font Software.

PERMISSION & CONDITIONS
Permission is hereby granted, free of charge, to any person obtaining a copy of the Font Software, to use, study, copy, merge, embed, modify, redistribute, and sell modified and unmodified copies of the Font Software, subject to the following conditions:

1) Neither the Font Software nor any of its individual components, in Original or Modified Versions, may be sold by itself.

2) Original or Modified Versions of the Font Software may be bundled, redistributed and/or sold with any software, provided that each copy contains the above copyright notice and this license. These can be included either as stand-alone text files, human-readable headers or in the appropriate machine-readable metadata fields within text or binary files as long as those fields can be easily viewed by the user.

3) No Modified Version of the Font Software may use the Reserved Font Name(s) unless explicit written permission is granted by the corresponding Copyright Holder. This restriction only applies to the primary font name as presented to the users.

4) The name(s) of the Copyright Holder(s) or the Author(s) of the Font Software shall not be used to promote, endorse or advertise any Modified Version, except to acknowledge the contribution(s) of the Copyright Holder(s) and the Author(s) or with their explicit written permission.

5) The Font Software, modified or unmodified, in part or in whole, must be distributed entirely under this license, and must not be distributed under any other license. The requirement for fonts to remain under this license does not apply to any document created using the Font Software.

TERMINATION
This license becomes null and void if any of the above conditions are not met.

DISCLAIMER
THE FONT SOFTWARE IS PROVIDED "AS IS", WITHOUT WARRANTY OF ANY KIND, EXPRESS OR IMPLIED, INCLUDING BUT NOT LIMITED TO ANY WARRANTIES OF

MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NONINFRINGEMENT
OF COPYRIGHT, PATENT, TRADEMARK, OR OTHER RIGHT. IN NO EVENT SHALL THE
COPYRIGHT HOLDER BE LIABLE FOR ANY CLAIM, DAMAGES OR OTHER LIABILITY,
INCLUDING ANY GENERAL, SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL
DAMAGES, WHETHER IN AN ACTION OF CONTRACT, TORT OR OTHERWISE, ARISING
FROM, OUT OF THE USE OR INABILITY TO USE THE FONT SOFTWARE OR FROM
OTHER DEALINGS IN THE FONT SOFTWARE.
